The idea that blood vessel dilation causes migraine was based on the fact that people who have migraines usually experience a throbbing headache, ----.

yani, namely /in other words atfedilebilir

unveil/ reveal/show

- (A) that is, this could be attributed to the fact that pain is such a subjective experience, and so hard to unravel, and migraine causes such varied symptoms
- (B) though this hypothesis of neuroscientists was supported by research that involved injecting volunteers with drugs to dilate their blood vessels, which tends to cause headaches
- (C) thus the dilation causing migraine does not result in severe damage to the brain that is seen in degenerative conditions such as Alzheimer's disease
- (D) but after developing tools to better measure the blood flow in the brain neuroscientists saw that people experiencing a migraine did not appear to have dilated vessels as expected
- (E) for it has been 40 years since neuroscientists discovered a chemical that can influence the nervous system as well as dilating blood vessels

37-42 : For these questions, choose the most accurate Turkish translation of the sentences in English, and the most accurate English translation of the sentences in Turkish.

GABA, a neurotransmitter that slows brain activity, can provide relief from depression and anxiety, but there is no firm evidence that, taken as a supplement, the substance crosses the blood-brain barrier in a way to have an effect on nervous system function. (when)

- A Beyin aktivitesini yavaşlatan bir nörotransmitter olan GABA, depresyon ve kaygıya karşı rahatlama sağlayabilir ancak takviye olarak alındığında bu maddenin sinir sisteminin işleyişinde bir etki yaratacak şekilde kan-beyin bariyerini aştığına dair kesin bir kanıt yoktur.
- B Beyin aktivitesini yavaşlatan bir nörotransmitter olan GABA maddesinin, takviye olarak alındığında kan-beyin bariyerini aşmış sinir sisteminin işleyişinde bir etki yarattığına dair kesin bir kanıt yoktur ancak depresyon ve kaygıya karşı rahatlama sağlayabilir.
- C Beyin aktivitesini yavaşlatan bir nörotransmitter olan GABA, takviye olarak alındığında kan-beyin bariyerini aştığına dair kesin bir kanıt olmayan bir maddedir ancak sinir sisteminin işleyişinde bir etki yaratarak depresyon ve kaygıya karşı rahatlama sağlayabilir.
- D Depresyon ve kaygıya karşı rahatlama sağlayarak beyin aktivitesini yavaşlatan bir nörotransmitter olan GABA maddesinin, takviye olarak alındığında kan-beyin bariyerini aşmış sinir sisteminin işleyişinde bir etki yarattığına dair kesin bir kanıt yoktur.
- E Beyin aktivitesini yavaşlatarak depresyon ve kaygıya karşı rahatlama sağlayan bir nörotransmitter olan GABA maddesi takviye olarak alındığında, sinir sisteminin işleyişinde bir etki yaratacak şekilde kan-beyin bariyerini aştığına dair kesin bir kanıt yoktur.

63-67 : For these questions, choose the best option to complete the dialogue.

Angela:

- My MRI appointment is going to be two months from now. It takes ages to get your body scanned. If only there was a more practical way to do it.

Meredith:

- You know, that kind of technology may not be too far. I've heard scientists are developing a skin patch as small as a match box that could actually monitor the molecules within deep tissue.

Angela:

- I don't think something that small could detect, for example, malignant tumours. How would it manage to delve deep into the tissue?

Meredith:

Angela:

- Interesting! I hope it becomes available as soon as possible.

- A** Using bulky equipment such as MRI will be a thing of the past when this device precisely detects the cells disrupting the normal functioning of the body.
- B** The researchers are currently investigating a range of other clinical applications for the patch other than tumorous cells or internal bleeding.
- C** Before it becomes a convenient alternative to other forms of diagnosis, it has to undergo a multitude of tests for precision.
- D** The patch fires laser pulses into the tissue then detects the soundwaves emitted by molecules, which helps pinpoint the molecules acting differently.
- E** This way, there would be a revolution in the treatment of many people suffering from life-threatening conditions.

68-71 : For these questions, choose the best rephrased form of the given sentence.

1 **Although the definitions of genius are culture-bound and subjective,** psychologists **are trying to determine what factors** might contribute to its **emergence.** 2 3 4 5

- hangı
- (A) Psychologists who are trying to pinpoint the factors that may foster the emergence of genius find its definitions biased and valid only within a particular culture.
- ✓ (B) The definitions of genius are unique to each culture and open to different interpretations, yet psychologists are trying to identify the factors that may foster the emergence of genius. 1 3 4 5
- (C) The definitions of genius can change from culture to culture, and thus cannot be standardised, so psychologists have difficulty in identifying the factors that foster its emergence.
- (D) Psychologists who try to pinpoint the factors that facilitate the emergence of genius are offering culture-specific and prejudiced definitions.
- (E) The factors that facilitate the emergence of genius have not been clearly identified; hence, the definitions psychologists have proposed are culture-specific and may have wider implications.

72-75 : For these questions, choose the best option to complete the missing part of the passage.

Coping is defined as a person's patterns of response to stress. Many clinicians think that differences in attitudes towards stressful events are the single most important factor in assessing a person's vulnerability to stress-related illnesses. --- One person may regard a stressful event as a challenge that can be surmounted while another views it as a problem with no solution. The person's resources, previous physical and psychological health, and previous life experience affect interpretation of the event. Someone who has had good experiences of overcoming hardships is more likely to develop a positive interpretation of stressful events than someone who has been repeatedly beaten down by abuse and later traumas.

- (A) People who use problem-focused coping have fewer illnesses, and are less likely to become emotionally exhausted.
- (B) Some studies conducted in the last decade have found no significant gender differences in coping styles.
- (C) An individual's ability to cope with stress depends, in part, on his or her interpretation of the event.
- (D) Research indicates that some categories of people have a higher risk of health problems related to stress.
- (E) The causes of stress may include any event or situation that a person considers a threat to his or her coping strategies.

76-80 : For these questions, choose the irrelevant sentence in the passage

After /in the wake of /subsequent to

(I) Following the development of agriculture in Southwest Asia, farming began to be practised in Türkiye and then Greece, followed by the rest of Europe. (II) Models of this spread are debated, with some arguing for movements of people and other arguing for a transfer of ideas and new technology. (III) New evidence based on plant data suggests that a complex mix of both was involved. (IV) Based on radiocarbon-dated finds of plant remains, the spread took place at an estimated rate of 1 km/year, likely being adopted in fertile river valleys first. (V) The choice of what crops to grow was not, in fact, always predicated upon environmental considerations, and social or economic factors could weigh more heavily.

- (A) I
- (B) II
- (C) III
- (D) IV
- (E) V
